

Specification YBL\_v20

# YARDMASTER® WASH SYSTEM

- The Yardmaster Wash System uses volume rather than pressure
- Reduces wash time by up to 90%
- Uses NO MORE water than conventional methods
- Simple to operate

The Yardmaster Wash System comprises a high volume pump and a number of fixed outlets. The outlets, used one at a time, can swivel 360 degrees, enabling the operator to wash a vast area from the one point. The only requirement is a water storage tank located near the pump.

“ The Yardmaster Wash System can hose a yard that holds 460 cows in just 6 minutes. It is designed to clean new and existing yards of any size, multiple slopes or surface types using no more water than conventional methods. So if you would rather spend time doing something more productive, now you can! ”

## Ideal for...

All yards, including multiple slope yards. Steep sloping yards are no longer necessary

## Applications & Case Studies
